

REFLEXION

Zanders Reflexion is the inkjet paper collection, produced by M-real Zanders, specially developed to ensure outstanding printed results on most popular inkjet printers. Zanders Reflexion is compatible with a wide range of popular inkjet printers as Hewlett-Packard, Canon, Epson and Lexmark.

PRINTING INFORMATION

For perfect printed results on Zanders Reflexion follow the guidelines below:

1. Allow the paper to return to room conditions before use: temperature 15–25°C (59–77°F), humidity 40–60%rh.
2. To preserve the quality of your paper, always keep unused paper in its original packaging. Store the packaging away from extreme temperatures, high humidity and bright light. Extreme conditions will reduce the print quality. Store in a flat, cool and dry place.
3. Follow the printer manufacturer's instructions for loading the media correctly.
4. Do not touch the printable side (glossy or smoother), handle paper by the edges to avoid fingerprints. Moisture and oil from your skin can affect print quality.
5. Do not fold or roll the paper.
6. Do not touch the printed side or stack your printouts until the ink is dry.
7. Instant drying for all Zanders Reflexion qualities.
8. Store your printouts away from extreme temperatures, high humidity and bright light.
9. Avoid displaying your printouts outdoors or in a place exposed to direct sunlight to minimise fading.
